Summary

My first foray into programming was at the age of 14. I ran a server on my home network that served a PHP site with Apache. Since then I have involved my self in everything from robotics to artificial intelligence.

An enthusiastic work ethic and high attention to detail are qualities I bring to each project. I bring my whole self to tasks and goals, demonstrating my dedication to quality of work and creating healthy relationships with everyone around me. Strong interpersonal communication and conflict resolution skills make me an excellent collaborator. In my free time, I enjoy immersing myself in new technologies. Curiosity is the largest driver of my learning.

Education

Dev Bootcamp - Ruby on Rails Developer

Gained valuable experience in many aspects of software development. This includes technical skills but equally importantly, how to be on a team. Was put in difficult situations and given the tools to work effectively together and built strong team skills.

Frontend Masters - Meteor

Learned practical usage of Meteor from one of the projects creators and maintainers. Engaged in enlightening discussion to dive deep into the inner workings of the framework. The result was a holistic understanding of the intricacies.

Activities

Dev Bootcamp Mentor Program - Mentor

I supported my mentee in transitioning into the intense work routine at Dev Bootcamp. I provided not only technical, but also mental and emotional advice.

FIRST Robotics Team 2491

Led a team of 5 students to develop, test and maintain a code base for a robot two years in a row. Provided insight and knowledge to new members. Built and continued relationships with multi-billion dollar companies to secure funding for out team for years to come.

Skills

Technology

- JavaScript (Meteor, JQuery, ES6, Handlebars and other libraries) 9/10
- Linux (deployment, maintenance, scripting) 8/10
- Ruby, on and off the web (Rails and Sinatra) 7/10
- HTML 7/10
- CSS 6/10
- PostgreSQL 6/10

Experience

Veteran Insider - August 21 to current

I designed, built and deployed a Rails application that helps connect veterans with employers. Within the first week I was valuable to the team and guided the CEO through important choices about the product.
